

# Getting started with Shiny

Mine Çetinkaya-Rundel

@minebocek   
mine-cetinkaya-rundel   
cetinkaya.mine@gmail.com 

goog-index/app.R

DEMO

- Go to the goog-index folder in the RStudio Cloud project
- Launch the app by opening app.R and clicking Run App
- Close the app by clicking the stop icon
- Select view mode in the drop down menu next to Run App

3<sub>m</sub> 00<sub>s</sub>

# High level view

Every Shiny app has a webpage that the user visits,  
and behind this webpage there is a computer  
that serves this webpage by running R.

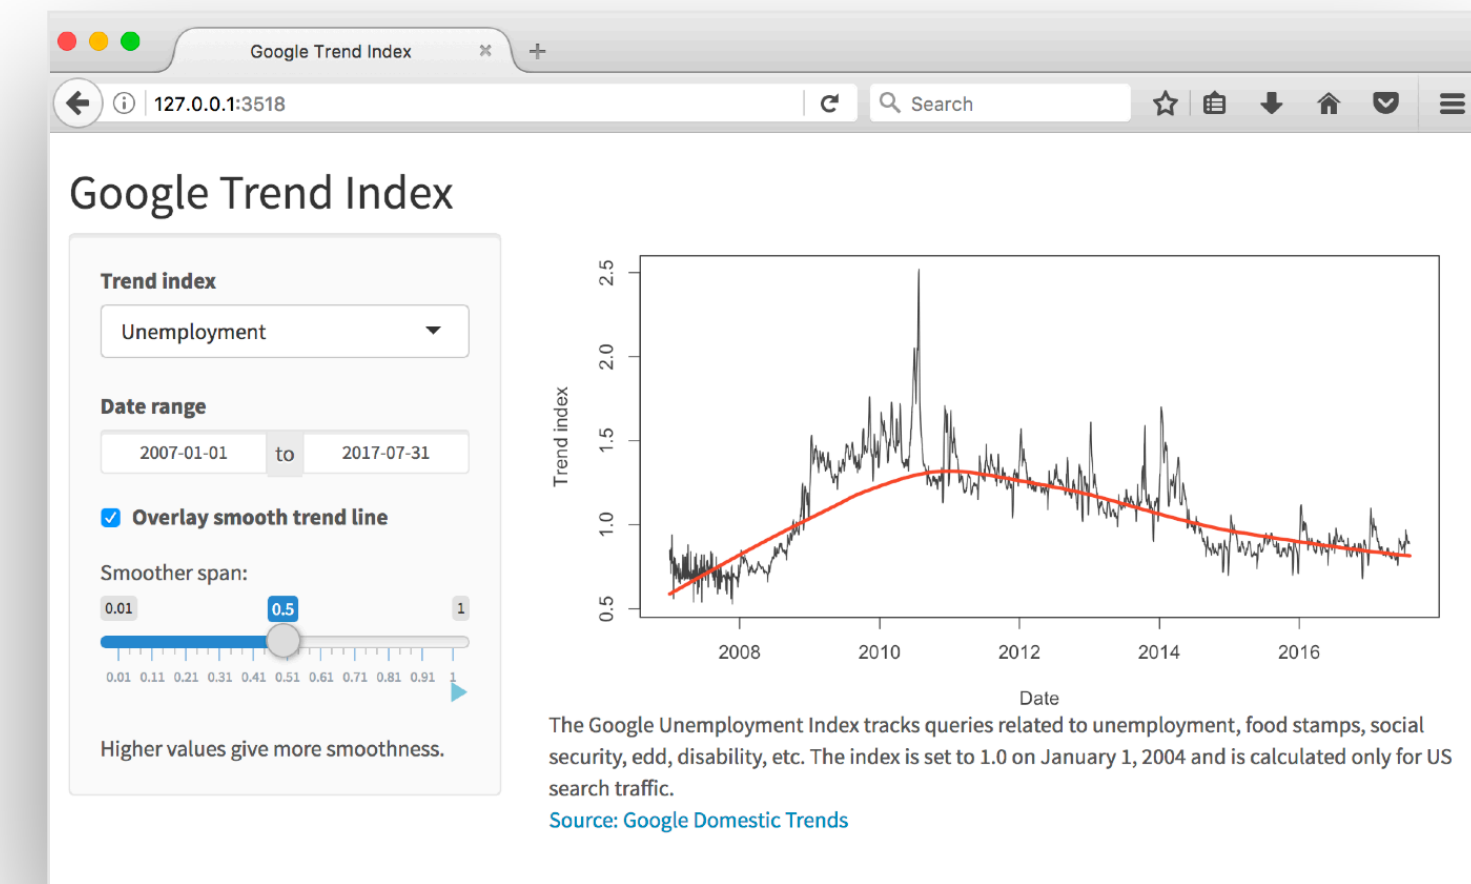

When running your app locally,  
the computer serving your app is your computer.

# When your app is deployed, the computer serving your app is a web server.

Server instructions

User interface

# Anatomy of a Shiny app

# What's in an app?

```
library(shiny)
```

```
ui <- fluidPage()
```

## User interface

controls the layout and appearance of app

```
server <- function(input, output) {}
```

## Server function

contains instructions needed to build app

```
shinyApp(ui = ui, server = server)
```

Let's build a simple movie browser app!

`movies-apps/data/movies.Rdata`

Data from IMDB and Rotten Tomatoes on random sample of 651 movies released in the US between 1970 and 2014

# App template

```
library(shiny)
library(tidyverse)
load("data/movies.Rdata")
ui <- fluidPage()
```

Dataset used for this app

```
server <- function(input, output) {}
```

```
shinyApp(ui = ui, server = server)
```

# User interface

```

# Define UI
ui <- fluidPage(

  # Sidebar layout with a input and output definitions
  sidebarLayout(
    # Inputs: Select variables to plot
    sidebarPanel(
      # Select variable for y-axis
      selectInput(inputId = "y", label = "Y-axis:",
                  choices = c("imdb_rating", "imdb_num_votes", "critics_score", "audience_score", "runtime"),
                  selected = "audience_score"),
      # Select variable for x-axis
      selectInput(inputId = "x", label = "X-axis:",
                  choices = c("imdb_rating", "imdb_num_votes", "critics_score", "audience_score", "runtime"),
                  selected = "critics_score")
    ),

    # Output: Show scatterplot
    mainPanel(
      plotOutput(outputId = "scatterplot")
    )
  )
)

```

Create fluid page layout

```
# Define UI
```

```
ui <- fluidPage(  
  
  # Sidebar layout with a input and output definitions  
  sidebarLayout(  
    # Inputs: Select variables to plot  
    sidebarPanel(  
      # Select variable for y-axis  
      selectInput(inputId = "y", label = "Y-axis:",  
                  choices = c("imdb_rating", "imdb_num_votes", "critics_score", "audience_score", "runtime"),  
                  selected = "audience_score"),  
      # Select variable for x-axis  
      selectInput(inputId = "x", label = "X-axis:",  
                  choices = c("imdb_rating", "imdb_num_votes", "critics_score", "audience_score", "runtime"),  
                  selected = "critics_score")  
    ),  
  
    # Output: Show scatterplot  
    mainPanel(  
      plotOutput(outputId = "scatterplot")  
    )  
  )  
)
```

```
# Define UI
```

```
ui <- fluidPage(
```

```
# Sidebar layout with a input and output definitions
```

```
  sidebarLayout(
```

```
    # Inputs: Select variables to plot
```

```
    sidebarPanel(
```

```
      # Select variable for y-axis
```

```
      selectInput(inputId = "y", label = "Y-axis:",
```

```
                   choices = c("imdb_rating", "imdb_num_votes", "critics_score", "audience_score", "runtime"),
```

```
                   selected = "audience_score"),
```

```
      # Select variable for x-axis
```

```
      selectInput(inputId = "x", label = "X-axis:",
```

```
                   choices = c("imdb_rating", "imdb_num_votes", "critics_score", "audience_score", "runtime"),
```

```
                   selected = "critics_score")
```

```
    ),
```

```
    # Output: Show scatterplot
```

```
    mainPanel(
```

```
      plotOutput(outputId = "scatterplot")
```

```
    )
```

```
  )
```

```
)
```

Create a layout with a sidebar and main area

```
# Define UI
```

```
ui <- fluidPage(
```

```
# Sidebar layout with a input and output definitions
```

```
  sidebarLayout(
```

```
    # Inputs: Select variables to plot
```

```
    sidebarPanel(
```

```
      # Select variable for y-axis
```

```
      selectInput(inputId = "y", label = "Y-axis:",  
                  choices = c("imdb_rating", "imdb_num_votes", "critics_score", "audience_score", "runtime"),  
                  selected = "audience_score"),
```

```
      # Select variable for x-axis
```

```
      selectInput(inputId = "x", label = "X-axis:",  
                  choices = c("imdb_rating", "imdb_num_votes", "critics_score", "audience_score", "runtime"),  
                  selected = "critics_score")
```

```
    ),
```

```
    # Output: Show scatterplot
```

```
    mainPanel(
```

```
      plotOutput(outputId = "scatterplot")
```

```
    )
```

```
  )
```

Create a sidebar panel containing **input** controls that can in turn be passed to `sidebarLayout`

```
# Define UI
```

```
ui <- fluidPage(
```

```
# Sidebar layout with a input and output definitions
```

```
  sidebarLayout(
```

```
    # Inputs: Select variables to plot
```

```
    sidebarPanel(
```

```
      # Select variable for y-axis
```

```
      selectInput(inputId = "y", label = "Y-axis:",  
                  choices = c("imdb_rating", "imdb_num_votes", "critics_score",  
                              "audience_score", "runtime"),  
                  selected = "audience_score"),
```

```
      # Select variable for x-axis
```

```
      selectInput(inputId = "x", label = "X-axis:",  
                  choices = c("imdb_rating", "imdb_num_votes", "critics_score",  
                              "audience_score", "runtime"),  
                  selected = "critics_score")
```

```
    ),
```

```
    # Output: Show scatterplot
```

```
    mainPanel(
```

```
      plotOutput(outputId = "scatterplot")
```

```
    )
```

```
  )
```

**Y-axis:**

audience\_score ▼

**X-axis:**

critics\_score ▲

imdb\_rating

imdb\_num\_votes

critics\_score

audience\_score

runtime

```
# Define UI
```

```
ui <- fluidPage(
```

```
# Sidebar layout with a input and output definitions
```

```
  sidebarLayout(
```

```
    # Inputs: Select variables to plot
```

```
    sidebarPanel(
```

```
      # Select variable for y-axis
```

```
      selectInput(inputId = "y", label = "Y-axis:",  
                  choices = c("imdb_rating", "imdb_num_votes", "critics_score", "audience_score", "runtime"),  
                  selected = "audience_score"),
```

```
      # Select variable for x-axis
```

```
      selectInput(inputId = "x", label = "X-axis:",  
                  choices = c("imdb_rating", "imdb_num_votes", "critics_score", "audience_score", "runtime"),  
                  selected = "critics_score")
```

```
    ),
```

```
    # Output: Show scatterplot
```

```
    mainPanel(
```

```
      plotOutput(outputId = "scatterplot")
```

```
    )
```

```
  )
```

```
)
```

Create a main panel containing **output** elements that get created in the server function can in turn be passed to sidebarLayout

# Server

```
# Define server function
server <- function(input, output) {

  # Create the scatterplot object the plotOutput function is expecting
  output$scatterplot <- renderPlot({
    ggplot(data = movies, aes_string(x = input$x, y = input$y)) +
      geom_point()
  })
}
```

```
# Define server function
```

```
server <- function(input, output) {
```

```
# Create the scatterplot object the plotOutput function is expecting
```

```
output$scatterplot <- renderPlot({
```

```
  ggplot(data = movies, aes_string(x = input$x, y = input$y)) +
```

```
    geom_point()
```

```
})
```

```
}
```

Contains instructions  
needed to build app

```
# Define server function
```

```
server <- function(input, output) {
```

```
# Create the scatterplot object the plotOutput function
```

```
output$scatterplot <- renderPlot({
```

```
  ggplot(data = movies, aes_string(x = input$x, y = input$y,
```

```
    geom_point()
```

```
  })
```

```
}
```

Renders a **reactive** plot that is suitable for assigning to an output slot

```
# Define server function
```

```
server <- function(input, output) {
```

```
# Create the scatterplot object the plotOutput function is expecting
```

```
output$scatterplot <- renderPlot({
```

```
  ggplot(data = movies, aes_string(x = input$x, y = input$y)) +
```

```
    geom_point()
```

```
})
```

```
}
```

Good ol' ggplot2 code,  
with **inputs** from UI

# UI + Server

```
# Create the Shiny app object  
shinyApp(ui = ui, server = server)
```

Putting it all together...

`movies-apps/movies-01.R`

**DEMO**

- Start with `movies-apps/movies-01.R`
- Add new select menu to color the points by
  - `inputId = "z"`
  - `label = "Color by:"`
  - `choices = c("title_type", "genre", "mpaa_rating", "critics_rating", "audience_rating")`
  - `selected = "mpaa_rating"`
- Use this variable in the aesthetics of the `ggplot` function as the color argument to color the points by

movies-apps/movies-02.R

**SOLUTION**

# Inputs

## Shiny : : CHEAT SHEET

### Basics

A **Shiny** app is a web page (**UI**) connected to a computer running a live R session (**Server**)

Users can manipulate the UI, which will cause the server to update the UI's displays (by running R code).

### APP TEMPLATE

Begin writing a new app with this template. Preview the app by running the code at the R command line.

• **ui** - nested R functions that assemble an HTML user interface for your app

• **server** - a function with instructions on how to build and rebuild the R objects displayed in the UI

• **shinyApp** - combines ui and server into an app. Wrap with **runApp()** if calling from a sourced script or inside a function.

### SHARE YOUR APP

The easiest way to share your app is to host it on shinyapps.io, a cloud based service from RStudio

1. Create a free or professional account at <https://shinyapps.io>

2. Click the **Publish** icon in the RStudio IDE or run: **rsconnect::deployApp()** ("path to directory")

**Build or purchase your own Shiny Server** at [www.rstudio.com/products/shiny-server/](https://www.rstudio.com/products/shiny-server/)

**R Studio**

### Building an App

Add inputs to the UI with "input()" functions. Add outputs with "Output()" functions. Tell server how to render outputs with R in the server function. To do this:

1. Refer to outputs with **output\$** id
2. Refer to inputs with **input\$** id
3. Wrap code in a **render()** function before saving to output

Save your template as **app.R**. Alternatively, split your template into two files named **ui.R** and **server.R**.

Save each app as a directory that holds an **app.R** file (or a **server.R** file and a **ui.R** file) plus optional extra files.

• **app.R** - defines objects available to both ui.R and server.R

• **DESCRIPTION** - optional used in showcase mode

• **README** - optional data, scripts, etc.

• **other files** - optional directory of files to share with web browsers (images, CSS, js, etc.). Must be named "www"

• **global.R** - optional defines objects available to both ui.R and server.R

• **server.R** - optional used in showcase mode

• **ui.R** - optional data, scripts, etc.

• **other files** - optional directory of files to share with web browsers (images, CSS, js, etc.). Must be named "www"

• **global.R** - optional defines objects available to both ui.R and server.R

• **server.R** - optional used in showcase mode

• **ui.R** - optional data, scripts, etc.

• **other files** - optional directory of files to share with web browsers (images, CSS, js, etc.). Must be named "www"

• **global.R** - optional defines objects available to both ui.R and server.R

• **server.R** - optional used in showcase mode

• **ui.R** - optional data, scripts, etc.

• **other files** - optional directory of files to share with web browsers (images, CSS, js, etc.). Must be named "www"

### Inputs

collect values from the user. Access the current value of an input object with **input\$** - **inputId**. Input values are **reactive**.

**actionButton**(inputId, label, icon, ...)

**actionLink**(inputId, label, icon, ...)

**checkboxGroupInput**(inputId, label, choices, selected, inline)

**checkboxInput**(inputId, label, value)

**dateInput**(inputId, label, value, min, max, format, startview, weekstart, language)

**dateRangeInput**(inputId, label, start, end, min, max, format, startview, weekstart, language, separator)

**fileInput**(inputId, label, multiple, accept)

**numericInput**(inputId, label, value, min, max, step)

**passwordInput**(inputId, label, value)

**radioButtons**(inputId, label, choices, selected, inline)

**selectInput**(inputId, label, choices, selected, multiple, selectize, width, size) (also **selectizeInput()**)

**sliderInput**(inputId, label, min, max, value, step, round, format, locale, ticks, animate, width, sep, pre, post)

**submitButton**(text, icon)

**textInput**(inputId, label, value)

**textOutput**(outputId, width, height, click, dblclick, hover, hoverDelay, inline, hoverDelayType, brush, clickid, hoverid)

**imageOutput**(outputId, width, height, click, dblclick, hover, hoverDelay, inline, hoverDelayType, brush, clickid, hoverid)

**plotOutput**(outputId, width, height, click, dblclick, hover, hoverDelay, inline, hoverDelayType, brush, clickid, hoverid)

- Start with `movies-apps/movies-02.R`
- Add new input variable to control the alpha level of the points
  - This should be a `sliderInput`
    - See [shiny.rstudio.com/reference/shiny/latest/](https://shiny.rstudio.com/reference/shiny/latest/) for help
  - Values should range from 0 to 1
  - Set a default value that looks good
- Use this variable in the `geom` of the `ggplot()` function as the alpha argument

10m 00s

Which input output duo can we use to get this table?

shiny.rstudio.com/reference/shiny/latest/

Y-axis:

Audience Score

X-axis:

Critics Score

Color by:

MPAA Rating

Alpha:

00.51

Type your answer in the chat

```
library(shiny)
library(tidyverse)
load("data/movies.Rdata")
ui <- fluidPage(

  DT::dataTableOutput()

)

server <- function(input, output) {

  DT::renderDataTable()

}

shinyApp(ui = ui, server = server)
```

Over the break, if you like...

- Start with `movies-apps/movies-03.R`
- Create a new output item using `DT::renderDataTable()`.
- Show first seven columns of movies data, show 10 rows at a time, and hide row names, e.g.
  - `data = movies[, 1:7]`
  - `options = list(pageLength = 10)`
  - `rownames = FALSE`
- Add a `DT::dataTableOutput()` to the main panel
- Run the app in a new Window

10<sub>m</sub> 00<sub>s</sub>

movies-apps/movies-04.R

**SOLUTION**

Add a checkbox to show/hide the  
data table

`movies-apps/movies-05.R`

**DEMO**

- Start with `movies-apps/movies-05.R`
- Add a title to your app with `titlePanel`, which goes before the `sidebarLayout`
- Prettify the variable names shown as input choices. Hint:
  - `choices = c("IMDB rating" = "imdb_rating", ...)`
- Prettify the axis and legend labels of your plot. Hint: You might use
  - `stringr::str_replace_all()` (loaded with `tidyverse`)
  - `tools::toTitleCase()`

movies-apps/movies-06.R

**SOLUTION**

# Helper functions

DEMO

movies-apps/movies-07.R

# Execution

Where you place code in your app will determine how many times they are run (or re-run), which will in turn affect the performance of your app, since Shiny will run some sections your app script more often than others.

# Execution

```
library(shiny)
library(tidyverse)
load("movies.Rdata")
```

```
ui <- fluidPage(
  ...
)
```

```
server <- function(input, output) {
  output$x <- renderPlot({
    ...
  })
}
```

```
shinyApp(ui = ui, server = server)
```

Run once  
when app is  
launched

# Execution

```
library(shiny)
library(tidyverse)
load("movies.Rdata")
```

```
ui <- fluidPage(
  ...
)

server <- function(input, output) {
  output$x <- renderPlot({
    ...
  })
}
```

Run once  
each time a user  
visits the app

```
shinyApp(ui = ui, server = server)
```

# Execution

```
library(shiny)
library(tidyverse)
load("movies.Rdata")

ui <- fluidPage(
  ...
)

server <- function(input, output) {
  output$x <- renderPlot({
    ...
  })
}

shinyApp(ui = ui, server = server)
```

Run once  
each time a user  
changes a widget that  
output\$x depends on

# File structure

# Single file

- One directory with every file the app needs:
  - `app.R` - your script which ends with a call to `shinyApp()`
  - datasets, images, css, helper scripts, etc.

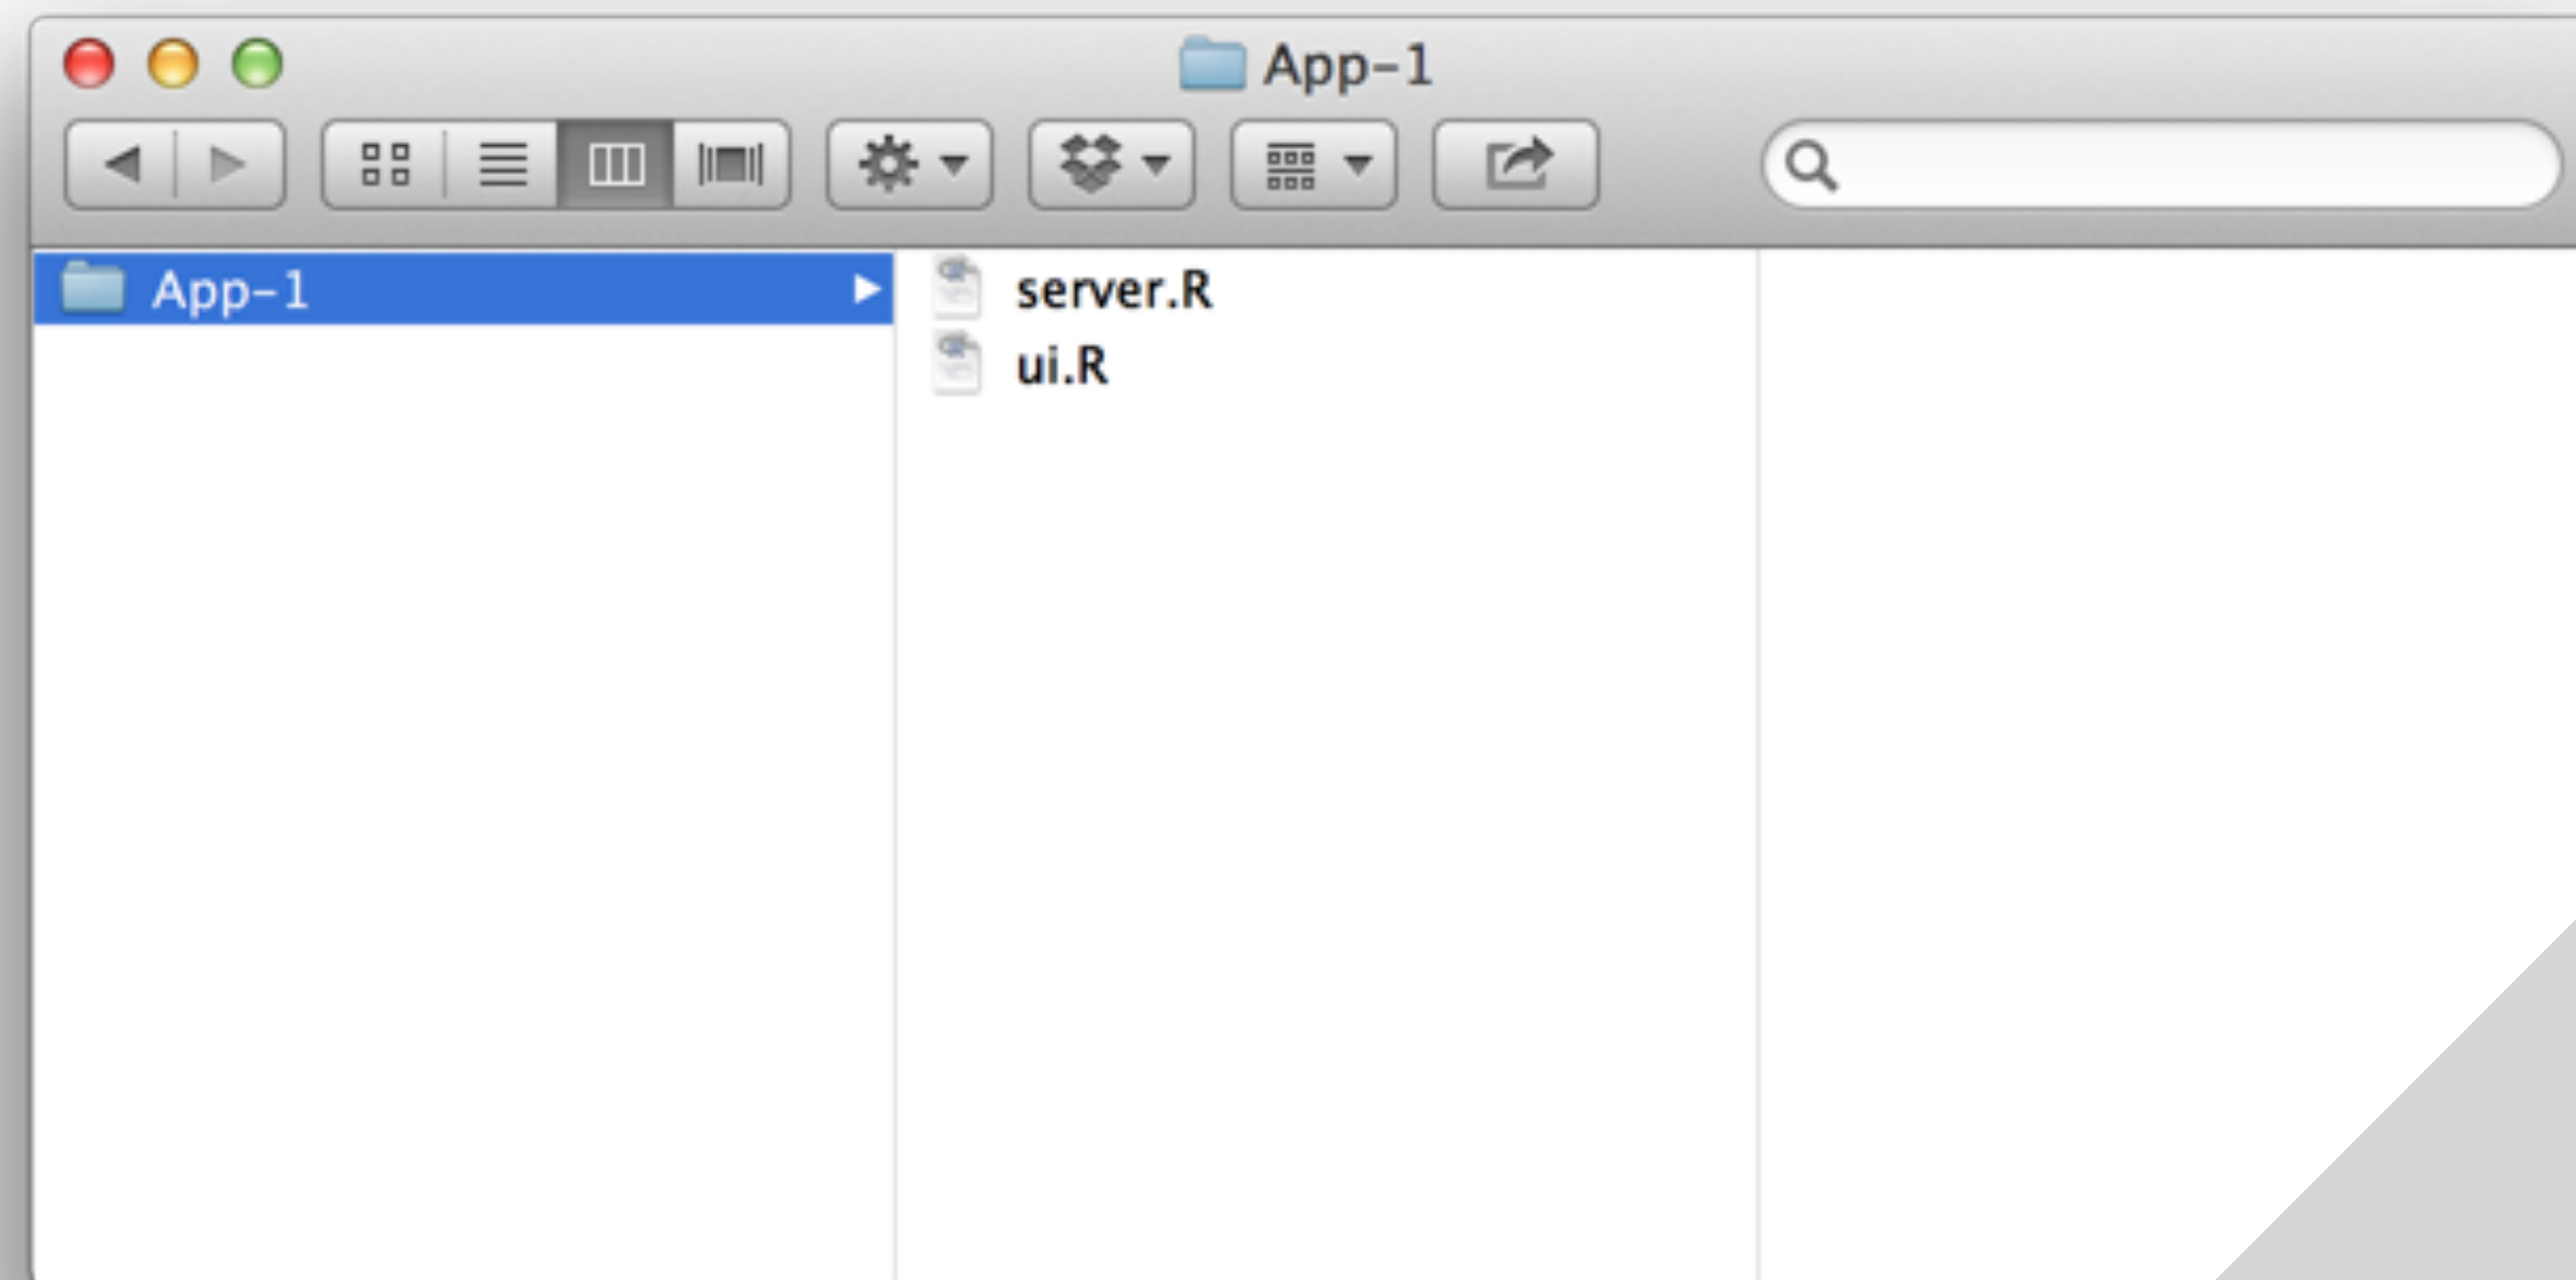

**We will focus on  
the single file  
format  
throughout the  
workshop**

You must use this  
exact name (**app.R**)  
for deploying the app

# Multiple files

- One directory with every file the app needs:
  - `ui.R` and `server.R`
  - datasets, images, css, helper scripts, etc.

You must use these exact names

# Deploying your app

# shinyapps.io

- A server maintained by RStudio
- Easy to use, secure, and scalable
- Built-in metrics
- Free tier available

- Go to shinyapps.io and log in or create a free account
- In RStudio Cloud:
  - Open `movies-explorer/app.R`
  - Run the app — this is the last app we worked on, saved in a new folder where the folder name is the name of the app we want to deploy and the filename is changed to `app`
  - Follow the instructions and deploy your first app!
- See <https://shiny.rstudio.com/tutorial/written-tutorial/lesson7/> for more

# Shiny Server

- Free and open source
- Deploy Shiny apps to the internet
- Run on-premises: move computation closer to the data
- Host multiple apps on one server
- Deploy inside the firewall

# RStudio Connect

- Secure access and authentication
- Performance: fine tune at app and server level
- Management: monitor and control resource use
- Direct priority support
